

SonicPoints On-Demand Task Management Systems Research

Overview

SonicPoints enables users to instantly take ownership of tasks inside projects and earn rewards upon completion. Instead of waiting for manual assignments, users can pick tasks themselves and start working immediately — boosting flexibility and motivation.

Key Features

- **Instant task claiming and assignment**
- **Real-time status updates (Backlog → In Progress → Review → Completed)**
- **Points earned immediately after task completion**
- **Project-specific leaderboards and reward redemption**
- **Push notifications (future potential) for task updates or achievements**

Examples

- **WorkManagement Board: Users drag tasks into their own workflow and start working instantly.**
- **Leaderboard System: Tracks who has completed the most tasks and earned the most points.**
- **Reward Redemption Module: Users redeem points anytime they hit a milestone.**

Pros

- **Highly flexible and self-driven task management**
- **Great for boosting user engagement and ownership mentality**
- **Reduces dependency on manual task assignment by managers**
- **Encourages quicker project progress**

Cons

- **Potential for users to claim tasks but not complete them without monitoring**
- **Requires role-based restrictions to ensure proper quality control (only certain roles can complete or review)**
- **Might need real-time notifications to fully optimize experience**

Lessons for Future Improvements

- **Add simpler task claiming — just one click to start a task**
- **Future feature: real-time progress tracking (e.g., tasks being worked on now)**
- **Implement a rating or feedback system after task completion to maintain quality**
