

SonicPoints Project Collaboration Platforms Research

Overview

SonicPoints is a project collaboration platform where users can manage tasks, track project progress, earn points for completing work, and redeem rewards — all inside a secure, role-based environment. It's focused on convenience, motivation, and accountability for teams.

Key Features

- **Browse and join active projects**
- **View assigned tasks and update statuses easily**
- **Earn points and track leaderboard rankings**
- **Redeem rewards with earned points**
- **View project progress and KPI analytics**
- **JWT-secured login, session management, and role-based access control**

Examples

- **WorkManagement Page:** Allows users to manage, drag, and drop tasks between statuses.
- **Leaderboard Page:** View top contributors in the project based on task completions and earned points.
- **Redeem Page:** Users can browse available rewards and redeem their earned points.
- **AdminPanel:** Admins manage projects, users, tasks, rewards, and view overall project KPIs.

Pros

- **Easy and organized task management for all team members**
- **Incentivizes productivity by gamifying work completion with points and rewards**
- **Builds project loyalty and engagement when rewards are desirable**
- **Helps managers track project health through progress metrics and KPIs**

Cons

- **Requires active maintenance (task updates, reward catalog management)**
- **Mismanagement of user roles can lead to confusion**
- **High expectations for real-time updates (tasks, leaderboard, points)**
- **Needs efficient backend support to manage scaling (many projects, tasks, users)**

Lessons for Future Improvements

- **Make task completion flow simpler: mark done, points awarded automatically**
- **Add automated reminders for approaching due dates (email or push notification)**
- **Collect user feedback after task completion to improve system usability and reward catalog**
