

SonicPoints Project Management Systems Research

Overview

SonicPoints project management system helps teams and organizations manage their projects efficiently — from task assignments and role-based workflows to tracking progress and rewarding users. It streamlines project collaboration by integrating work management with a gamified points and rewards system.

Key Features

- Project creation and user management
- Task assignment with status tracking (Backlog, In Progress, Review, Completed)
- Role-based access control (Admin, Manager, Checker, Member)
- Reward points for task completion
- Leaderboard for performance visibility
- Redeem points for project-specific rewards
- Reporting and analytics for project KPIs
- Secure JWT authentication and user login

Examples

- **WorkManagement Board:** Drag-and-drop Kanban task board organized by project.
- **AdminPanel Dashboard:** Admins manage users, projects, redeemable items, and KPIs.
- **Reward and Redeem Module:** Users redeem their earned points for items inside the platform.
- **Leaderboard Page:** Shows top users based on points, completions, and project participation.

Pros

- Centralized platform for managing projects and boosting team engagement
- Incentivizes productivity with real rewards and gamification
- Clear tracking of task status, project progress, and KPIs
- Secure authentication and role-based control over sensitive actions

Cons

- Complex for beginners — needs initial training for users/admins
- Depends on regular updates (task status, point redemption) to stay accurate
- If role permissions are mismanaged, access control issues could occur

Lessons for Future Improvements

- Implement progress tracking badges and achievement milestones (e.g., 100 tasks completed)
- Add a notification/reminder system for upcoming task deadlines or reward updates
- Improve admin reporting by adding export options (CSV, PDF) for KPIs and task analytics
