

Zoho Projects Research

Overview

Zoho Projects is an online project management tool designed to help businesses plan, track, and collaborate on projects efficiently. It offers a combination of task management, time tracking, and collaboration features suitable for various team sizes.

Key Features

- Task and milestone tracking with dependency mapping
- Gantt charts for project timelines
- Time tracking and timesheets
- Document sharing and team discussions
- Integrated issue tracking and bug management
- Automation workflows (Blueprints, Task Automation)

Examples

- Managing software development projects with task dependencies and time tracking
- Running a marketing campaign with Gantt chart visualization and automated task reminders

Pros

- Comprehensive feature set for small to medium businesses
- Strong collaboration tools (chat, forums, file sharing)
- Affordable pricing compared to competitors like Jira
- Good reporting and analytics options out-of-the-box

Cons

- Interface can feel slightly cluttered for new users
- Advanced features (like task automation) need proper setup
- Customization is strong, but sometimes overwhelming for simple needs

Lessons for SonicPoints

- Introduce Gantt chart view for projects to visualize task timelines
- Add support for task dependencies (e.g., "Task B starts only after Task A completes")
- Improve team collaboration features inside projects — maybe add a basic comment/chat option per task
- Maintain clean UI even while offering advanced functionality — avoid clutter
- Consider simple built-in time tracking for users working on tasks
